Custom Tailored Resumes

Quick start guide for your own resume workspace

Your experience

Verified career facts
and a complete job description

+

Claude Code

Match real experience
and tailor the documents

Three documents for each job

ATS resume

Used in application
portals for scanning

Professional resume

Direct human review
with profile picture

Cover letter

Job-specific letter with
profile picture

Your experience stays the source of truth.

Your own copy

Set up a workspace you control before adding personal information.

Keep the original public project free of personal data

Do not work in or add personal information to Horacio’s original public repository.

01

Download

Open the public project on GitHub. Choose Code, then Download ZIP.

02

Extract

Extract the ZIP into your own folder, such as My-Resume-Builder.

03

Use your folder

Run the builder locally. If you store personal files on GitHub, use a private repository.

Created and Published by Horacio Carpio, MBA, MS

One-time setup

Install the tools once. Reopen the same project folder for future applications.

Tools you need

- Claude Code with working account access
- Python with pip
- Node.js 18 or newer with npm

Terminal in your project folder

```
python -m pip install python-docx pillow pymupdf

npm install
```

Check the installation

```
claude --version      python --version
node --version        npm --version
```

Windows: open the extracted folder, right-click its background, then Open in Terminal.

Your career information

Add your own files to reference/. Keep factual evidence separate from style references.

core-resume.docx	**Required**	Real jobs, titles, dates, metrics, contact details and credentials.
photo.jpg	**Required for Professional outputs**	A centered portrait headshot. The builder crops it to 5:6.
background-notes.md	**Optional**	Additional factual experience, tools, certifications and leadership roles.
style-examples/	**Optional**	Up to two resumes for tone and structure. They supply no new facts.

Keep the core resume and background notes accurate and current.

Created and Published by Horacio Carpio, MBA, MS

The job description

Use the complete text so the builder can assess the actual requirements.

01 Copy the full job description

Include responsibilities, qualifications and requirements.

02 Save it as a plain text file

```
Acme_Director_Product.txt
```

03 Place it directly in jobs/

One .txt file per role. A link alone is not a job description.

Created and Published by Horacio Carpio, MBA, MS

The builder

Open Claude Code in your project folder, then run the slash command inside Claude Code.

In your terminal

claude

Inside Claude Code

/tailor-resume

Match

Read each active JD and check it against supported experience.

Validate

Build and score the ATS resume. Revise only where facts support it.

Generate

Reuse the tailored resume content and create the Professional files.

Review permission requests. The chat summary reports fit, scores and genuine gaps.

Created and Published by Horacio Carpio, MBA, MS

Document colors

Sidebar and accent colors are the confirmed customization controls.

Sidebar

Default: #1B2A49
Choose a dark color for readable white text.

Accent

Default: #C9A24B
Use the same colors in both Professional files.

Ask Claude when you run /tailor-resume

Use sidebar #2F4F3A and accent #D98C5F for both Professional documents.

Created and Published by Horacio Carpio, MBA, MS

Your output and final review

Open output/ and review every document before submitting an application.

ATS resume	Resume_<Company>_<Date>.docx Use for application portals.
Professional resume	Professional_<Company>_<Date>.docx Use for direct human review.
Professional cover letter	Professional_CoverLetter_<Company>_<Date>.docx Use for the job-specific letter.

Before you apply

Check facts, dates, metrics, contact details, target role, tone and layout- this adds human-in-the-loop for verification.

Created and Published by Horacio Carpio, MBA, MS

Quick reference

Repeat the workflow for each application. You do not need to repeat setup.

01 Copy the complete JD

02 Save a .txt file in jobs/

03 Run claude, then /tailor-resume

04 Review the files in output/

05 Apply and archive the JD in jobs/applied/

Troubleshooting

Claude not found
Recheck the installation and reopen the terminal.

Missing Professional files
Check photo.jpg, Node.js and npm install.

No active jobs
Check that .txt files sit directly in jobs/.

For more detail, use README.md in your project folder.
